(2) Failure of a pharmacist, pharmacy technician, licensee, or permit holder to submit to such an examination when directed, unless the failure was due to circumstances beyond his or her control, shall constitute an admission that he or she has developed such a mental or physical disability, or other condition, that continued practice is dangerous to patients or to the public. Failure to attend the examination shall constitute a default, and a final order suspending, limiting, restricting, or revoking the license or permit may be entered without the taking of testimony or presentation of evidence.

Legislative Research Commission Note (10/16/96). The initial 1996 codification of the amendments to this statute from the 1996 Regular Session has been revised with respect to subsection (5) of the statute. 1996 Ky. Acts ch. 257, sec. 16, made the venue for appeals "the Franklin Circuit Court" while 1996 Ky. Acts ch. 318, sec. 271, changed "permittee" to "permit holder," in existing language that set the venue for appeals as "the Circuit Court of the county in which the licensee, permittee or certificate holder conducts his practice or place of business." The changing of the word "permittee" to "permit holder" in this phrase was purely stylistic. Therefore, although Acts ch. 318 was a later enactment than Acts ch. 257 for purposes of KRS 446.250, the substantive amendment on this point in Acts ch. 257 prevails over the nonsubstantive, stylistic amendment in Acts ch. 318 pursuant to 1996 Ky. Acts ch. 318, sec. 358. The text of subsection (5) has been altered to reflect this determination.

Legislative Research Commission Note (7/15/96). This section was amended by 1996 Ky. Acts chs. 257 and 318. Where these Acts are not in conflict, they have been codified together. Where a conflict exists, Acts ch. 318, which was last enacted by the General Assembly, prevails under KRS 446.250.

NECESSITY, FUNCTION, AND CONFORMITY: KRS 217.819 directs the Kentucky Board of Pharmacy to prepare a nonequivalent drug product formulary of drugs which should not be interchanged by pharmacists. In conformance with the publication cited, "Approved Prescription Drug Products with Therapeutic Equivalence Evaluations," this administrative regulation lists controlled release tablets, capsules and injectables as noninterchangeable.

Section 1. The following are determined to be noninterchangeable: controlled release tablets, capsules and injectables - these dosage forms are subject to bioavailability and bioequivalence difference, primarily because different manufacturers developing controlled release products for the same active ingredient do not employ the same approach to formulating their controlled release products. Approved controlled release products for which bioequivalence data are available and considered as meeting necessary bioequivalence requirements are exempted from this administrative regulation.

The auxiliary system shall insure that all refills are authorized by the original prescription order and that the maximum number of refills is not exceeded. If the automated data processing system is restored to operation, the information regarding prescriptions filled and refilled during the inoperative period shall be entered into the automated data processing system within seventy-two (72) hours.

(10) Controlled substance data shall be identifiable apart from other items appearing in the record.

GENERIC LABELING STATEMENT

The Kentucky Board of Pharmacy has addressed generic labeling and has come up with these alternatives when product selection is utilized. Alternatives the Board recognizes in lieu of using just the name of the drug dispensed on the label of the prescription container when product selection [substitution] is made are as follows:

1) Methyldopa “generic substitution made for” Aldomet;
2) Methyldopa “dispensed in place of” Aldomet;
3) Methyldopa “substituted for” Aldomet;
4) Methyldopa “dispensed for” Aldomet;
5) Methyldopa “generic as” Aldomet.

The label must refrain from wording such as ‘same as’ or any inference that the substitution is the same as the trade name drug. Using only the trade name and the generic name on the label is not acceptable when denoting drug product selection. These alternatives were adopted by the Board to meet the requirement when the physician requests that both names appear on the label. This also should help those pharmacists supplying nursing homes and are required to have the name of the medication as it appears on the physician’s order in the chart.
